11.5 kW EV CHARGERS

Level 2 chargers require a 220-240 volt outlet that is typically used for major appliances such as a washing machine and electric clothes dryer. These chargers can be hardwired with a dedicated 220-240 volt circuit.

Level 2 chargers are ideal for places where individuals plan to park their cars for a long period of time - i.e. hotels, garages, airports, malls, etc. Level 2 chargers take approximately 8-10 hours to fully charge an EV. Electric vehicles can go from zero to full charge in just under 10 hours.
